Rare Disease Day 2023:

BGTC Video and Animation Premieres

In honor of Rare Disease Day, the Bespoke Gene Therapy Consortium proudly shares the premiere of two new video pieces that highlight the project as a whole, and the Consortium's specific therapeutic technology focus.

The first video, a live-action short film, gives an overview of the program's goals, bookended by the story of Sharon King, who lost her daughter Taylor to a rare disease and joined the BGTC as a patient advocate through partner organization Aldevron.

The second video is an animated piece that visually and clearly explains Adeno-Associated Virus (AAV) technology, the delivery platform on which the BGTC is focusing its efforts for addressing rare diseases, particularly for very small patient populations.

Commemorate Rare Disease Day with us!
